

Figure 2. Outcome-specific sample flow and public-data boundaries

Dataset	Released	Signal/structural gate	Primary estimation	Outcome-specific N / boundary
ds004504	88	88 usable	N=88	MMSE N=88
ds006036	88	88 records; 372 reconstructable blocks	N=76-80 by primary visual endpoint	MMSE/group N varies by estimand
ds005048	35	35 usable	40-Hz N=35	MMSE N=33
ds006222	69 participants / 70 records	6/6 sampled signal gate	Full-cohort signal not modeled	Behavior unavailable
ds007648	22	20 neural usable	8,579 accuracy trials	7,456 correct RT trials
ds006780	123 ASSR	111 technical	d-prime N=111	FSIQ N=109
Dryad theta	44	44 complete released table	132 rhythmic condition rows	R2: 3/5 technical; R2b pending

Counts are not additive across columns. Trials, blocks, runs, and participant-condition rows are repeated observations, not independent participants.
